Validated Requirements Set

Cedar Junction — Week 4 Validated Requirements Set · Revision 44

R-01 · functional

Requirement: The system must distinguish a scheduling slot awaiting final confirmation from an appointment where the visitor has arrived but cannot proceed.

Source: W04-S01 · Dana Ruiz

Rationale: Dana explained that scheduling and intake use the word “held” for different conditions. Distinguishing these conditions will reduce confusion and help staff determine whether an appointment can proceed.

Acceptance check: Given one slot awaiting final confirmation and one appointment where the visitor has arrived but cannot proceed, when staff view their statuses, then the system clearly distinguishes the two conditions.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: “Held” must have two distinct meanings: a scheduling slot awaiting final confirmation and an appointment where the visitor has arrived but cannot proceed. The appointment status must clearly distinguish these conditions so intake staff know whether the visitor can move forward.

R-02 · functional

Requirement: The system must allow authorized intake staff to identify the current appointment status, determine who last changed it, and identify the next approved step when the status is unclear.

Source: W04-S01 · Dana Ruiz

Rationale: Dana stated that staff currently have to call around while visitors wait. Providing the status, change history, and next approved step will help staff resolve uncertainty without unnecessary delays.

Acceptance check: Given an appointment with an unclear status, when authorized intake staff review its record, then they can identify its current condition, the person who last changed it, and the next approved step.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: “Held” must have two distinct meanings: a scheduling slot awaiting final confirmation and an appointment where the visitor has arrived but cannot proceed. The appointment status must clearly distinguish these conditions so intake staff know whether the visitor can move forward.

R-03 · business

Requirement: The organization must ensure that a same-day appointment is offered only when both a room and a qualified clinician are available.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Dr. Lena Okafor confirmed that an open time on the calendar does not mean an appointment is ready. Checking room and clinician availability helps prevent staff from promising a start time that cannot be met.

Acceptance check: Given a same-day appointment request, when either a room or a qualified clinician is unavailable, then the appointment must not be offered as ready. When both are available, the capacity requirement is satisfied.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A confirmed appointment must not be treated as ready unless both a room and a qualified clinician are available. If readiness changes after confirmation, the appointment status and the affected staff's expectations must be updated.

R-04 · functional

Requirement: The system must update the appointment's readiness status and provide affected staff with the information needed to communicate a revised expectation when readiness changes after confirmation.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Dr. Lena explained that changes in readiness affect both staff and the visitor. Timely, appropriate updates help staff communicate the next steps without exposing unnecessary clinical details.

Acceptance check: Given a confirmed appointment whose readiness changes, when the change is recorded, then the current readiness status is updated and affected staff can access the information needed to communicate the revised expectation without seeing unnecessary clinical details.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A confirmed appointment must not be treated as ready unless both a room and a qualified clinician are available. If readiness changes after confirmation, the appointment status and the affected staff's expectations must be updated.

R-05 · user

Requirement: Authorized staff must be able to access a visitor's approved language, communication preferences, and support needs throughout appointment confirmation, rescheduling, and check-in.

Source: W04-S03 · Priya Shah

Rationale: Priya explained that the visitor's communication preference appeared in the access team's view but not in the intake queue. Making approved needs available throughout the workflow helps staff communicate appropriately and provide the support the visitor requires.

Acceptance check: Given an appointment with an approved communication preference and support need, when authorized staff view the appointment during confirmation, rescheduling, and check-in, then the approved information is available at each stage.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Approved language, communication preferences, and support needs must remain available to authorized staff through confirmation, rescheduling, and check-in. Visitors who cannot use the portal must have an equivalent phone or staff-assisted option, without having to repeat their needs at every handoff.

R-06 · constraint

Requirement: The appointment access process must provide a phone or staff-assisted alternative for visitors who cannot use the visitor portal.

Source: W04-S03 · Priya Shah

Rationale: Priya confirmed that access to the service cannot depend on a single digital channel. An alternative route allows visitors who cannot use the portal to receive appointment support.

Acceptance check: Given a visitor who cannot use the portal, when they request appointment assistance, then they can complete the required appointment-support process through a phone or staff-assisted route.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Approved language, communication preferences, and support needs must remain available to authorized staff through confirmation, rescheduling, and check-in. Visitors who cannot use the portal must have an equivalent phone or staff-assisted option, without having to repeat their needs at every handoff.

R-07 · nonfunctional

Requirement: The system must limit information shown on shared displays to the minimum necessary for the staff member's task and enforce role-based access to detailed information.

Source: W04-S04 · Jordan Kim

Rationale: Jordan Kim explained that shared displays should reveal only the information staff need to complete their tasks. Limiting displayed information and restricting detailed access by staff role helps protect privacy.

Acceptance check: Given staff members with different authorized roles, when they view a shared display and access detailed appointment information, then the shared display shows only the minimum information needed for the task and detailed information is available only to authorized roles.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays must show only the minimum information required for the staff member's task, with detailed information restricted according to authorized staff roles. The system must retain who changed a status, the previous value, the new value, and the time of the change, with the history available for exception reviews.

R-08 · functional

Requirement: The system must record who changed an appointment status, the previous value, the new value, and the time of the change, and retain this history for exception reviews.

Source: W04-S04 · Jordan Kim

Rationale: Jordan confirmed that staff need a reliable history of status changes during exception reviews. Recording these details helps authorized staff understand what changed and investigate discrepancies.

Acceptance check: Given an appointment status change, when the change is saved, then the audit history records the responsible person, previous value, new value, and timestamp, and authorized staff can retrieve the history during an exception review.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays must show only the minimum information required for the staff member's task, with detailed information restricted according to authorized staff roles. The system must retain who changed a status, the previous value, the new value, and the time of the change, with the history available for exception reviews.

Professional Guidance Assessment

IIBA: IIBA is a professional association that provides business analysis guidance, standards, and resources. It helps analysts understand stakeholder needs, define requirements, and evaluate whether solutions meet those needs.

ISO/IEC/IEEE 29148: Together, ISO, IEC, and IEEE publish ISO/IEC/IEEE 29148, which provides guidance on requirements engineering and helps make requirements clear, complete, consistent, and verifiable.

PMI: PMI focuses on project delivery and management, while Week 4 focuses on requirements analysis, stakeholder needs, and validation. PMI is related because requirements support successful project planning and implementation, but it is not the primary source for requirements-engineering guidance.

Application: This guidance helped make R-01 more precise, traceable, and checkable. Instead of simply saying that appointments should be clearer, it specifies that the system must distinguish a scheduling slot awaiting final confirmation from an appointment where the visitor has arrived but cannot proceed.

Prepared in Command Nexus. Canvas remains the official submission point.
